

123Scan

SEE WHY MORE THAN HALF A MILLION USERS RAVE ABOUT 123SCAN

The Industry's Simplest Configuration Wizard

If you think configuring scanners is a hassle, think again. Our patented Zebra's 123Scan utility has a patented configuration wizard that simplifies every step of deploying a scanner. Loaded with time-saving features and functionality, it's intuitive enough for first-time users. From the start, it automatically detects your data capture devices and walks you through the configuration process. You'll find it just as simple when it comes to updating scanner firmware, staging large numbers of devices, displaying barcode data and images, and generating reports. Little wonder then that hundreds of thousands of IT administrators swear by it.

Effortless Electronic Staging in Record Time

With 123Scan, staging is faster and 100% accurate. This utility offers an industry first — the ability to automatically detect and program your scanners — without scanning a barcode. Users can download parameters and update firmware in one easy step. Save settings in a configuration file that you can then distribute via email, electronically download to a scanner or print as a single programming barcode. For the first time ever, updating firmware no longer involves lost settings that prevent your scanner from communicating with its host; 123Scan preserves and automatically re-loads your pre-upgrade settings. And the addition of one or more USB hubs enables Mass Upgrade Mode for batch staging in groups of up to 10 scanners simultaneously.

Ability to Display Images and Barcode Data

Error-proof your process. 123Scan can display scanned barcodes in its DataView, including non-printable characters, and document everything in

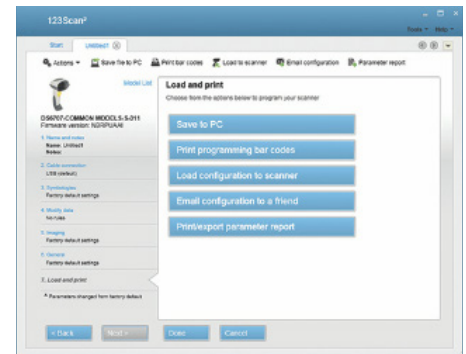

a Microsoft Word friendly report. Paired with an imaging scanner, 123Scan can capture, display and save images to your PC. Plus, it supports the optimization of image capture settings.

Ensure Compatibility with Your Existing Legacy Systems

Get the most from your investment. With 123Scan, you can easily integrate Zebra scanners into your existing hardware and application environment. 123Scan can program your scanner with an Advanced Data Formatting (ADF) rule that formats the barcode data before it is transmitted to your host application, ensuring compatibility. Staying up-to-date is just as easy. As new scanner models become available, 123Scan will automatically prompt you to download updates.

Comprehensive Reporting Options

Keep record of your scanners to keep them performing at their peak. From the inventory report, you can glean a list of all scanners that were staged including serial number, model number, firmware version, date of manufacture and more. With the parameter setting report, you gain a Microsoft Word friendly document

of your scanners' every programmed parameter and associated value. Use the statistics report to document every queried statistic and its associated value.

Go Beyond the Barcode

It takes more than hardware to resolve today's toughest, scanning challenges. It requires intelligent software to address the needs of every stakeholder. That's why our data capture devices contain DataCapture DNA, the genetic code that simplifies the entire Zebra scanning experience. As one of the many tools of DataCapture DNA, 123Scan makes deployment of scanners so much easier.
